

**Does my job
depend on
the breeder?**

Our jobs depend on energy.
We need the breeder to provide it.

Without energy, America can't work. We must have energy to fuel our plants, run our machines, and transport the things we produce.

Every day, we use more and more electricity to meet those needs. Today, we use five times more electricity each hour at work than we use at home.

We are no longer assured of having enough low-cost electricity. Without a solution, hundreds of thousands of jobs will be lost.

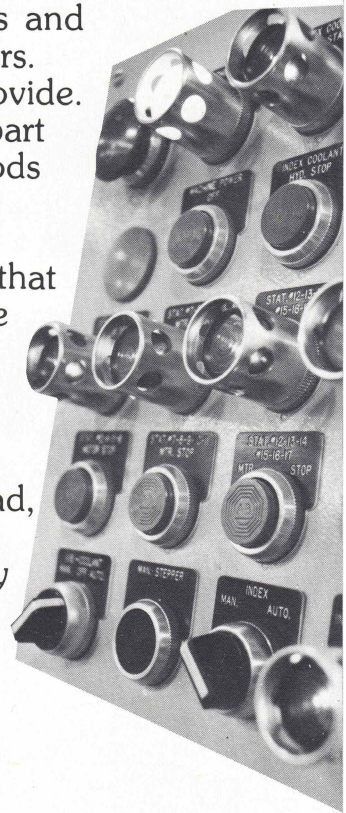

The solution will be the use of electricity the breeder will provide. An essentially unlimited supply of safe, clean, economical electricity.

With the breeder, we can leave our irreplaceable fossil fuels for more important uses. Like our petrochemical industries – the plastics and medicines and fertilizers. And the jobs they provide.

Energy is a major part of the cost of the goods we produce. Low-cost breeder electricity will keep prices down so that we can compete more effectively with other countries. This will mean more jobs for Americans.

In the decades ahead, our jobs will depend on a significant energy alternative.

The breeder is that alternative.

This is one of a series
of answers to the most
frequently asked questions
about breeder reactors.

the Breeder
